

case study

secure online backup

Telecoms for Business
teleMAXX

Telemaxx Ltd is an independent company committed to providing a high quality and competitively priced range of telecommunications services to the UK business sector.

Working from offices in Kettering, teleMAXX can transform any business through the power of their communications systems. They provide a complete service including the provision and support of telecoms hardware, together with both fixed and mobile airtime. teleMAXX offer advanced communication solutions in a rapidly changing environment, providing traditional PSTN and new Internet technologies, in addition to offering fixed line network services. Offering such services means that it is imperative for their data to be secure 100% of the time.

Expensive, slow and unreliable is how teleMAXX's previous tape-based backup system could be described. teleMAXX exchanged this for Datastore 365's online backup facility which provides high-speed automated data back up and recovery via the internet.

Whether it's a single mailbox or a 40MB file, recovery is almost instantaneously providing teleMAXX with considerable savings in IT resources and user productivity. Back ups now run automatically and easily complete within overnight back up windows giving teleMAXX the peace of mind they deserve.

"I have personally used this service on many occasions and had missing files back within seconds of realising they had gone."

James Brough,
Director
teleMAXX
