

# EMAIL FILTERING

## Complete control

Datastore365's email filtering service allows you to control inbound and outbound e-mail, protect against viruses and spam and in conjunction with our archiving & continuity service will allow you to access your inbox over the web in the event of a mail server failure.

Stopping spam before it reaches your mail server improves your bandwidth and reduces the load on your mail server.

Datastore365's email filtering service has a sophisticated rules engine that allows you to completely customise how mail flows to and from your organisation. You can set up rules to inspect the content of e-mails, investigate attachments, size, headers and take appropriate actions such as deliver, drop, quarantine and notify. There are over 20 conditional triggers that can be set up. An example may be to quarantine e-mails over a certain size and notify the administrator.

All of our services offer a 99.5% uptime guarantee.

-  Ease of management – no expertise required
-  Totally scalable
-  Comprehensive reporting and analysis
-  Mirrored platform across our two UK Tier 4 datacentres
-  Guaranteed redundancy and resilience
-  24/7 technical support

“From day one it was obvious that this was not a service we would be turning off in a hurry. The transition was painless. Within a week the pressure on staff and our internal systems had lifted”

# EMAIL FILTERING

## Key benefits

- Zero up-front investment in hardware or software
- Improve bandwidth and relieve stress on your e-mail server by removing spam before it enters your network
