ONLINE BACKUP FROM ASIGRA

Setting up Datastore365's online backup service could not be easier. Typically only one instance of our small footprint needs to be installed on your premises in order to collect data from all servers, network or local drives, applications and systems wherever they may reside on your LAN. Additional clients which offer remote backup capability for information held on desktops, laptops, smartphones and tablets may also be installed directly onto the mobile devices.

Data is then de-duplicated, encrypted, compressed and transmitted to our highly secure, fully resilient data-centre in Milton Keynes, and replicated to our Reading facility for total security. With our advanced support structure, we provide 24 hour support coverage, 365 days a year. Our support team never sleeps, so you may, confident that your data is protected around the clock.

Backup is all about recovery and if you are unable to restore your servers in an emergency your backups are worthless. We provide a service not just software. We are committed to helping you until you are fully up and running again.

All of our services offer a 99.5% uptime service level guarantee.
If you would like to discuss this or any other of our cloud based services, please contact us today.

"The Datastore365 Online Backup has been terrific. The interface is so simple. I can just forget the system is there whilst being confident it's doing it's job. I particularly like the way i'm informed when a backup is made and the reports I receive which tell me who's backing up or not. This has prevented critical data from potentially being lost."

-  Protect all operating systems and applications
-  Encryption and compression at source
-  Agentless software
-  Deduplication
-  256 Bit AES encryption
-  FIPS 140-2 accredited
-  24/7 support
-  Continuous data protection
